

1. Flashing calibrations into the ECM:

Plug the tuner into the OBD-II port and turn the key to the run position with the engine off. Press down button to scroll down until you come to the section of tunes that begin with the word “Full” not “Program”. Scroll to “FULL 1 DSP5MOD” and press the middle button. The first time you flash a calibration into the ECM the tuner will ask if you want to license the Tuner. Select the middle button. The tuner will then ask “Are you sure?” Press the middle button. The tuner will then load the file counting up from 0% to %100. When tuner displays the “Ignition Off Now” message, turn the ignition off and press the middle button. The tuner will count down from 10, once finished the new tune file will be in your ECM and you may drive the truck.

2. Switching Tunes on the fly

If your tuner was not ordered with a DSP5 switch (or you are using an edge monitor to switch the EFI Live) you can still change power levels on the fly. To do this, plug up the tuner and scroll down to “switch tunes” press the middle button. Then scroll to the power level you want and press the middle button. The unit will say “Tune switched”. If you install a DSP5 switch later instead of using the edge, the tune will have to be rewritten to work with the switch. Power levels are: stock, tow(50), street (70), hotstreet (100), race (130hp)

3. Reading and Clearing DTCs

To read DTCs, plug the tuner into the OBD-II port and turn the ignition to run, the first screen will be “Read DTCs”. Press the middle button and the tuner will display any DTCs present in the ECM.

To clear DTCs, scroll down to the “Clear DTCs” option. Press the middle button, the tuner will ask you “Are you sure?” press the middle button and the tuner will then clear the DTCs in the truck. You will hear three chimes from the dash and the check engine light will flash. Turn off the ignition and wait 10 seconds, turn the ignition back to run and start the truck. If the check engine light is still illuminated repeat the previous steps again.
